

MPLS WAN

A more flexible and resilient WAN

MPLS WAN from hSo:

Is your Wide Area Network (WAN) struggling to keep up with your business?

hSo is one of few WAN providers that can combine its own MPLS core with access to all major network operators. Ours is a cost-effective, end-to-end MPLS solution.

MPLS WAN

hSo's MPLS WAN key benefits:

Affordable

We work with multiple network operators to discover the best value options at each location. Then we combine them seamlessly.

Convergence

We can apply Quality of Service (QoS) across your WAN so data, voice and video apps can co-exist, without impacting service quality.

Adaptable

We make it easy to add new sites and adjust your bandwidth as your organisation grows.

Multi-carrier resilience

We can combine multiple circuits from different network operators to deliver unusually high levels of uptime.

VoIP friendly

Our MPLS WANs can prioritise time-sensitive traffic such as VoIP phone calls. And of course, your bills are slashed with VoIP.

Reliable

Our systems proactively monitor your circuit, alerting our specialists to any problems. And our service is backed by rigorous SLAs. VoIP compatible.

Additional benefits:

Cloud Internet options

As an hSo WAN customer, you can choose to have a central pool of Internet connectivity that's shared between your sites. This is often cheaper than buying a fixed amount of Internet access for each separate site, as each site can borrow Internet bandwidth unused by other sites.

24x7 support

Our UK-based technicians are on hand, day and night, to help you keep everything running smoothly.

MPLS broadband compatible

We can extend your MPLS WAN to smaller offices whose needs don't justify the cost of a leased line, providing them with broadband that plugs straight into your WAN, without requiring a VPN.

Triple ISO certified

hSo's services are independently audited for IT Service Management (ISO 20000), Quality (ISO 9001) and Information Security (ISO 27001).

hSo in facts and figures

- Founded in 2000
- Serving businesses only
- 30+ data centres
- ISO 27001 / ISO 9001 / ISO 20000
- 24/7 UK support
- Our own low latency MPLS network
